

# Using the MAVCC Curriculum

MAVCC realizes that instructors have limited budgets to purchase instructional materials; therefore we have teacher editions on CD-ROM to make them more affordable. We now offer student site licenses at a reduced cost as an alternative to print student editions. Site licenses allow schools/programs to incorporate MAVCC content into their on-line lessons for easy access by students from a computer.

## Teacher Edition CD-ROM

The teacher edition CD-ROM provides the following resources to assist instructors in planning for instruction and objectively evaluating student performance. Learning activities sheets, training and competency profiles, written tests, and PowerPoint® presentations may be customized to address local needs.

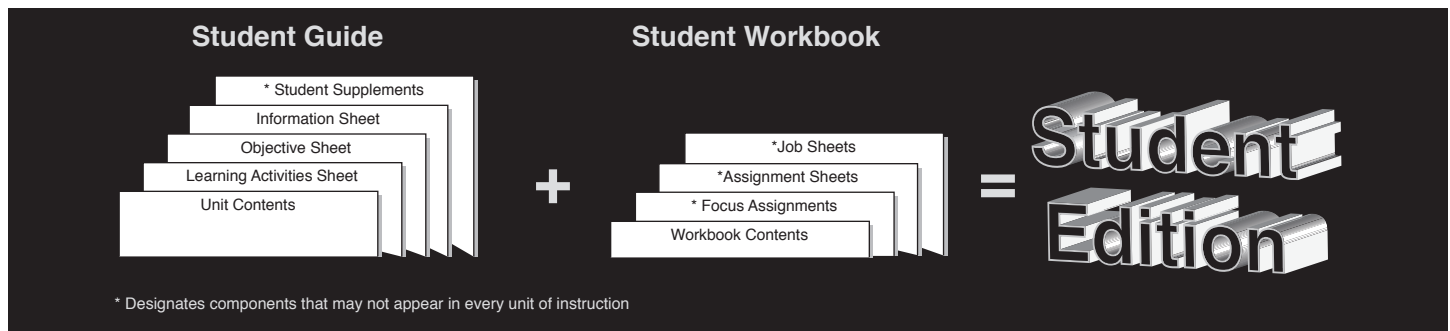

In addition, the print student guide and workbook (student edition) are included as part of the teacher edition to assist instructors in developing lesson plans and incorporating hands-on activities and other resources as appropriate.

✓ **Note:** In some cases, both the student guide and workbook materials have been incorporated into a single student edition.

## Student Guide and Workbook (Student Edition)

Instructors or students (where applicable) are encouraged to order both the student guide and workbook as content is cross-referenced. The student guide provides the knowledge that students will need to successfully complete the hands-on tasks presented in the student workbook. Specifically, the student guide and workbook include the following:

To view/print a sample unit of instruction for both the instructor and student, [click here](#), or go to “Resources”, then “Sample Units of Instruction” to select a sample unit for your area. You can even download and print copies to try out with your students before making your decision to purchase our materials.
